GOVERNANCE AND COMPLIANCE

“Governance”

Set of practices and tools that help organizations establish and enforce policies, manage resources, and maintain compliance within their Azure environment.

Scenario 1

Your organization wants to ensure that all virtual machines created in Azure follow a naming convention to maintain consistency.

Scenario 2

Your organization wants to always have daily backup enabled on every server

Solution

Option 1

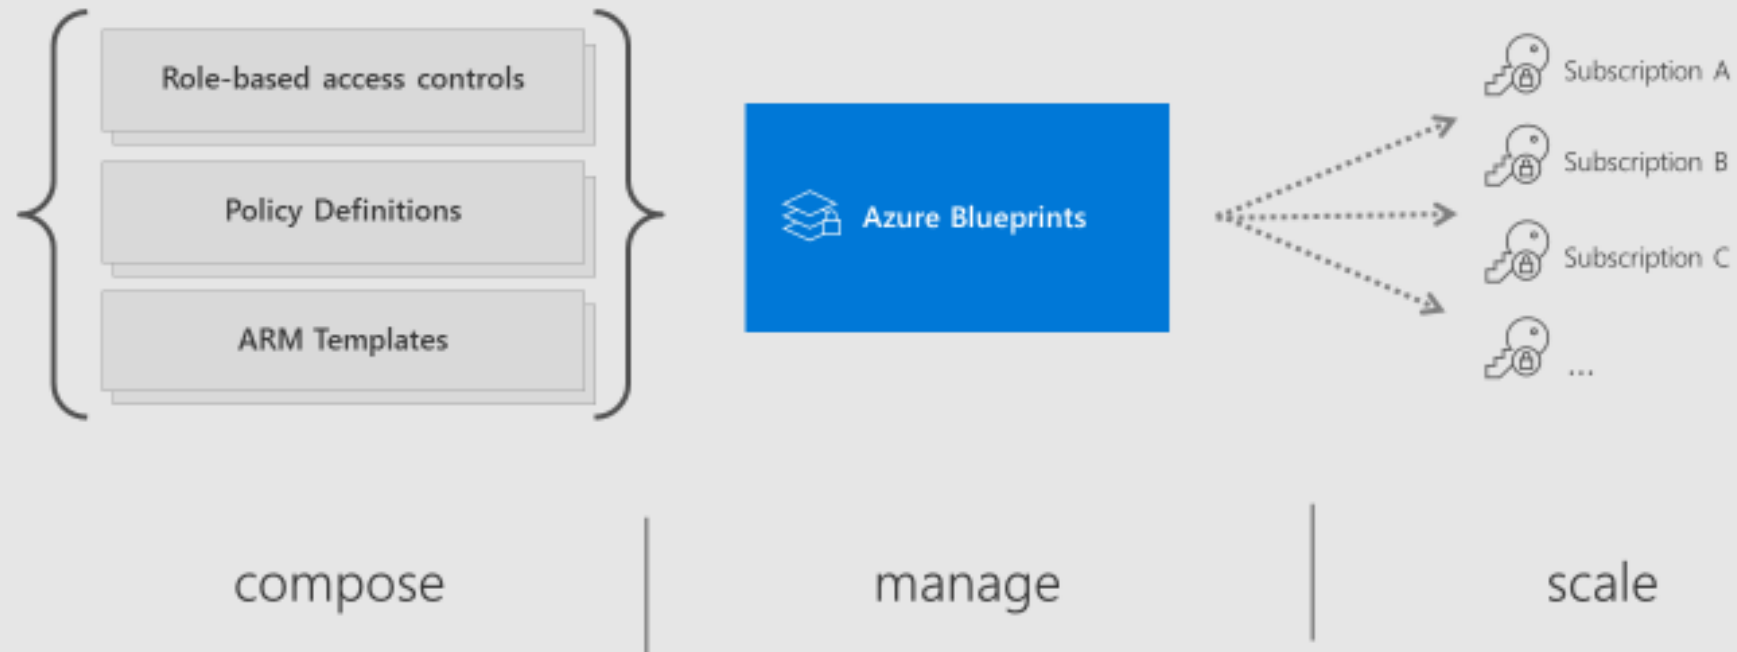

- Create a document that describes your rules
- Send an email with the rules
- Assume that everyone reads it and applies it

Option 2

- Use Azure tools to enforce the rules

Azure Blueprints

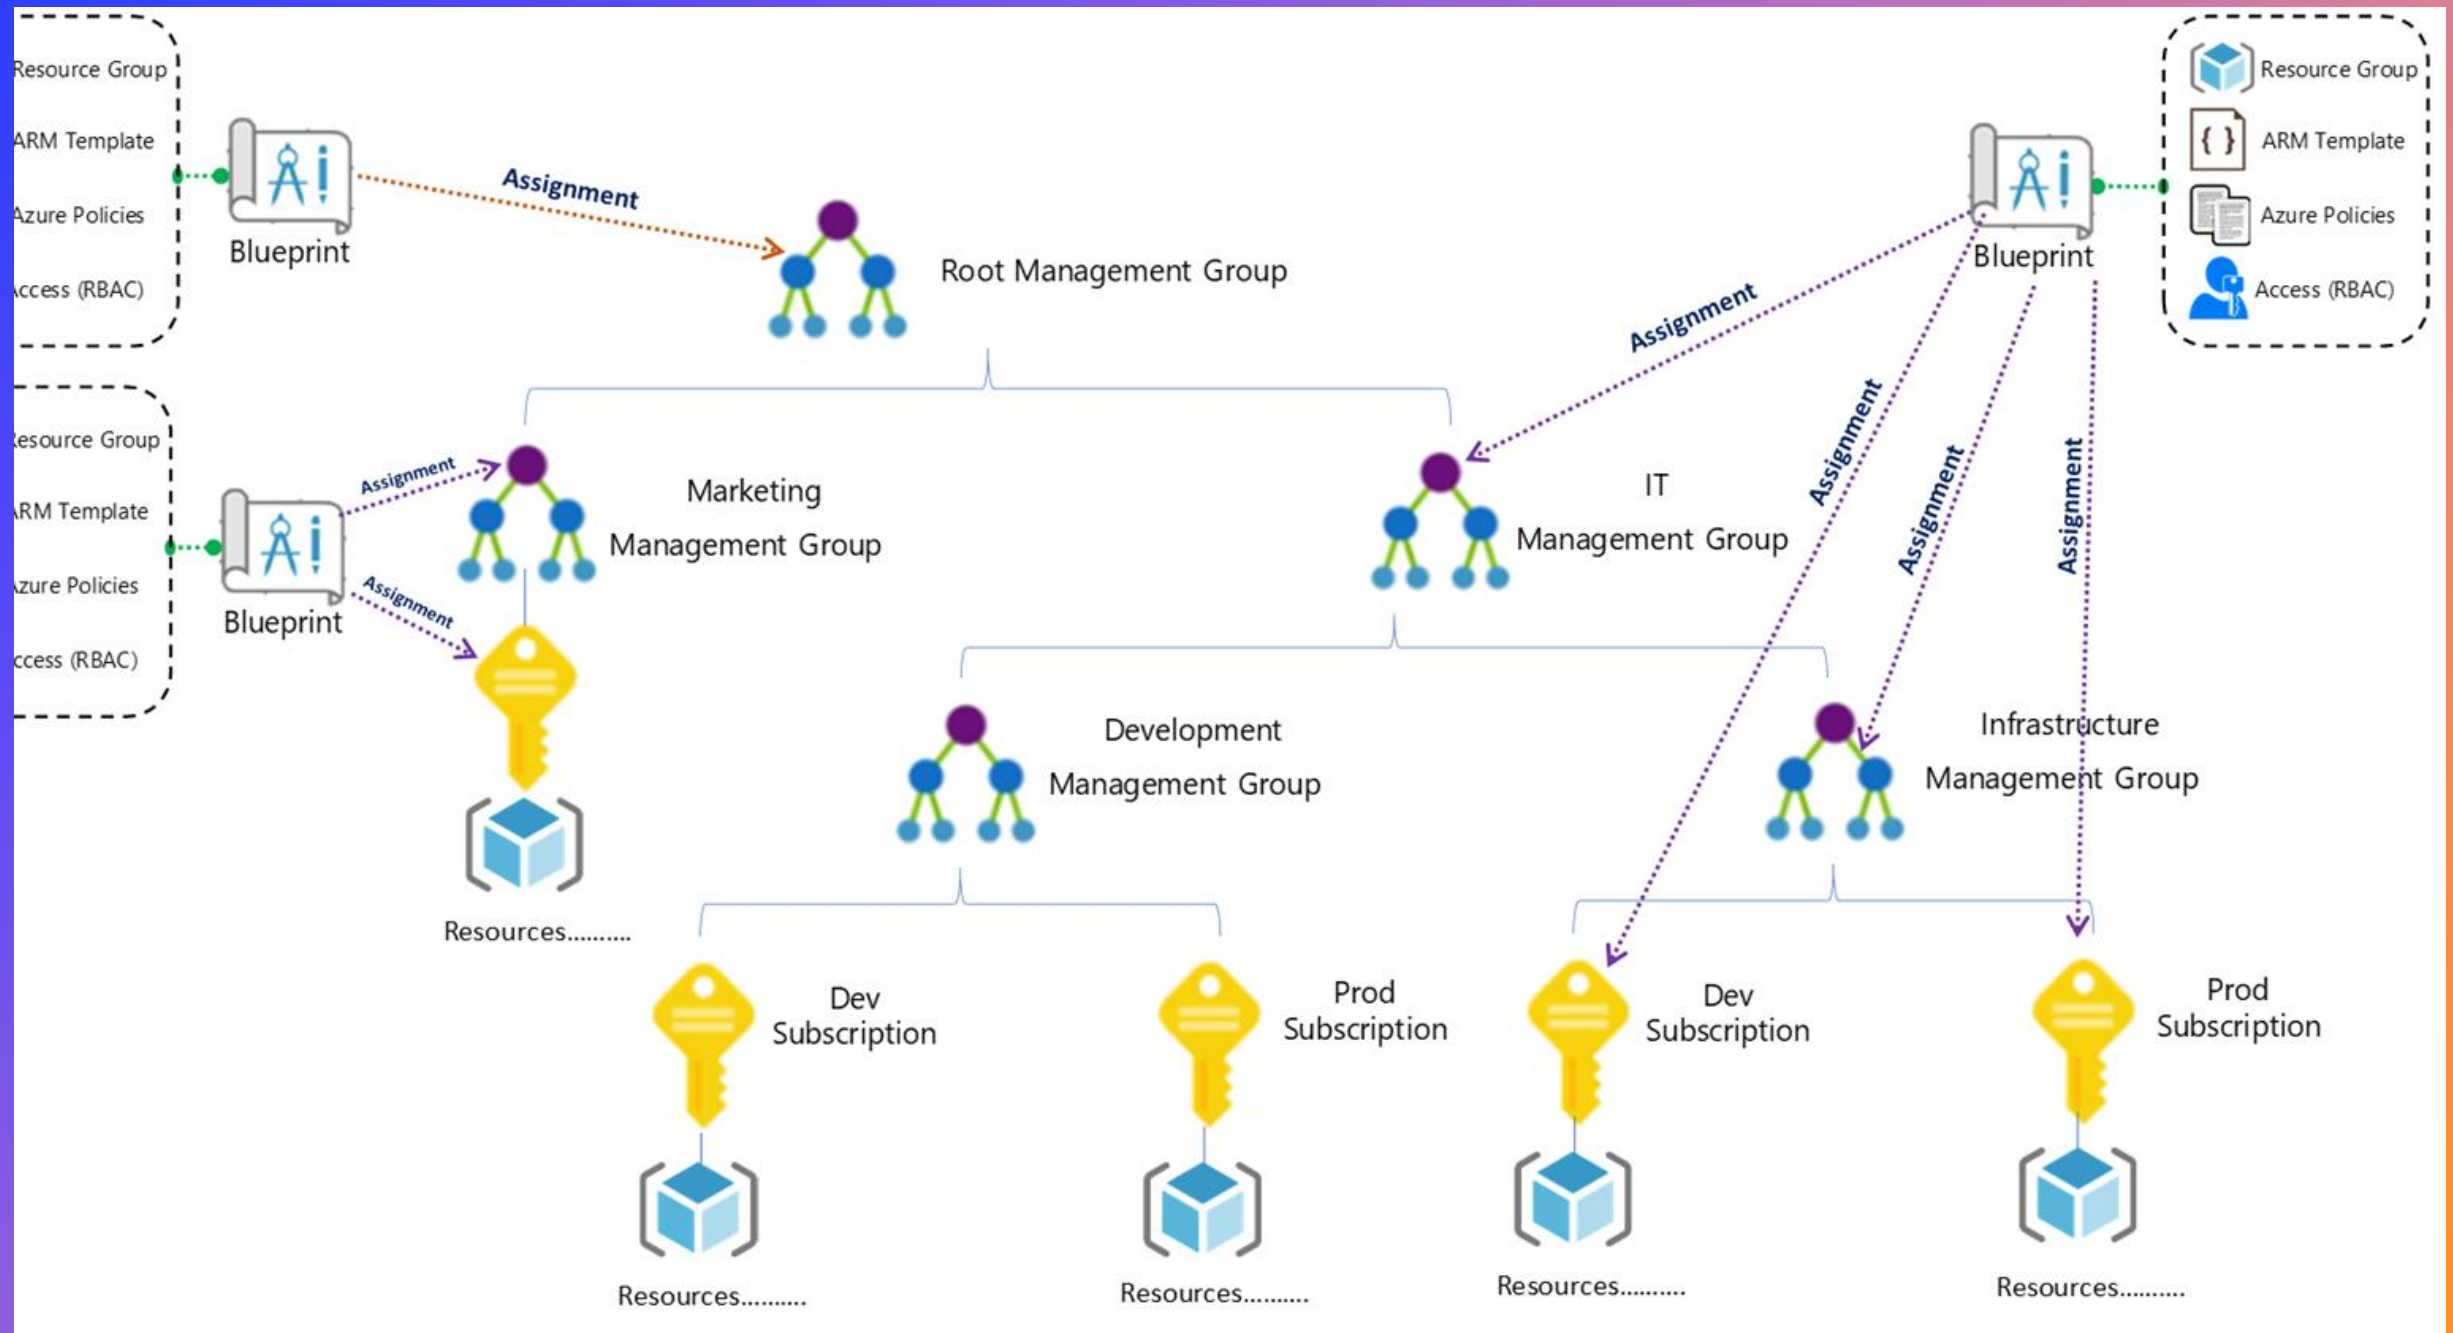

Enabling quick, repeatable creation of fully governed environments

<https://learn.microsoft.com/en-us/azure/governance/blueprints/overview>

Azure Blueprint

- The only way of assigning a “deny” permission.

Question

Which of the following statements best describes the relationship between Azure Blueprints and Azure Resource Manager (ARM) templates?

- a. Azure Blueprints and ARM templates are interchangeable terms for the same Azure service.
- b. Azure Blueprints uses ARM templates as a foundational component for resource deployment.
- c. ARM templates are an alternative to Azure Blueprints and serve the same purpose.
- d. Azure Blueprints and ARM templates have no direct relationship.

Question

Which Azure service is commonly integrated with Azure Blueprints for advanced policy enforcement and compliance management?

- a. Azure Functions
- b. Azure Logic Apps
- c. Azure Policy
- d. Azure Security Center

AZURE POLICY

Create rules
across all of your
Azure resources

Example of Built-In Policies

- Require SQL Server 12.0
- Allowed Storage Account SKUs
- Allowed Locations
- Allowed Virtual Machine SKUs
- Apply tag and its default value
- Not allowed resource types

Can create custom policies using Json Definitions

Question

Which of the following statements accurately describes an Azure Policy definition?

- a. It specifies the allowed values for parameters in a policy assignment.
- b. It defines a set of rules that are applied to resources to enforce desired configurations.
- c. It determines the order of resource deployment in a subscription.
- d. It is a blueprint for the entire Azure subscription.

Question

How does Azure Policy enforce compliance within an Azure environment?

- a. By automatically fixing non-compliant resources.
- b. By blocking the deployment of non-compliant resources.
- c. By generating compliance reports for manual review.
- d. By sending compliance alerts to administrators.

Question

Which Azure service works closely with Azure Policy to provide governance and compliance management?

- a. Azure Functions
- b. Azure Logic Apps
- c. Azure Active Directory
- d. Azure Blueprints

Question

How does Azure Policy support custom policy creation?

- a. By providing pre-defined policies only.
- b. By allowing direct editing of ARM templates.
- c. By using the Azure Policy Visual Studio Code extension.
- d. By integrating with Azure Resource Manager templates.

Question

What is the purpose of the "Policy Assignment" in Azure Policy?

- a. To define a new policy rule.
- b. To create a custom initiative.
- c. To associate a policy with a specific scope like a subscription or resource group.
- d. To enforce policies on non-compliant resources.

Question

In Azure Policy, what does the "Append" effect do?

- a. Adds additional parameters to a policy definition.
- b. Appends a new policy definition to an existing initiative.
- c. Merges with existing compliance data for a resource.
- d. Adds new policies to the policy store.

Resource Locks

1. Read only lock
2. Can not delete lock
